

Working with String Functions

Mr. Ferddie Q. Canlas

Basic String Operators and Functions

- The operator & is used to *concatenate string*.
- Any text enclosed in “ ” is considered *string*

Trimming Functions

- Functions to use to discard unwanted trailing or leading blanks,
 - *LTrim\$(text)*
 - *RTrim\$(text)*
 - *Trims\$(text)*

Extracting Functions

- Use to extract substring within a string
 - *Left\$(text, param)*
 - *Right\$(text, param)*
 - *Mid\$ (text, param)*

Counting Functions

- Use to count the number of characters in a string:
 - *Len(text)*

Conversion Functions

- Use to convert string into another form.
 - Asc(text)
 - Chr\$(code)
 - UCase\$(text)
 - LCase\$(text)

The StrConv Function

- Use to covert cases of a string
 - vbUpperCase
 - vbLowerCase
 - VbProperCase
- Syntax:
 - StrConv(text, param)

String() and Space\$()

- Use to add spaces or character(s).
- Syntax:
 - Space\$(*number of spaces*)
 - String(*number of character*, “*character to display*”)

StrComp() Function

- Use to compare two strings in the using case sensitive or case insensitive .
- Syntax:
 - StrComp(text1,text2, param)

Finding and Replacing Strings

- *InStr(text1, text2)* is being used to find substring within a string.
- *Like* keyword is same as above
- *Replace (Source, Find, Replace)* is being used to find and replace substring.

Thank you!!
